

FORESTRY AND KAIÑGINING IN THE PHILIPPINES  
A SELECTED BIBLIOGRAPHY

Prepared by  
Dr. Geoffrey A. J. Scott  
University of Winnipeg, Canada.

The following bibliography lists references under specific environment use related topics for the Philippines. Most references are available in the library at the Forest Research Institute (FORI) and the College of Forestry, University of the Philippines at Los Baños, Laguna RP. In most cases when a reference is first used a short statement about the contents of the article follows. When the reference is referred to again under another topic the reader is informed to turn back to this first use of the reference for full information. Articles are listed under the following section headings:

	<u>pages</u>
1. Aforestation - Reforestation	2 - 14
2. Deforestation	15 - 25
3. Forest Laws/Agencies	26 - 29
4. Vegetation Cover of R.P.	30 - 33
5. Parang - Fallow	34 - 35
6. Kaiñgin/Kaiñgineros	36 - 42
7. Kaiñgin Management	43 - 46
8. Modify Land Use	47 - 48
9. Conservation	49 - 51
10. Watershed Problems/Floods	52 - 54
11. Soil Erosion/Mass Wasting	55 - 57
12. Ipil-ipil ( <u>Leucaena</u> )	58 - 60
13. Mangroves	61 - 62

For reference materials, encouragement and assistance in preparing this selected bibliography I am greatly indebted to: Dr. Dominador Z. Rosell, President of the Philippine Geographical Society; Dr. Romeo Bruce, Professor of Photogrammetry, UP, Diliman; Dr. Bernardo Jasmine, FORI; Dr. Romeo Raros, Dr. Percy Sajise and Dr. Anacleto Duldulao, College of Forestry UPLB; Gordon Hart, Hilda Koslowsky and Robert Moskal, Winnipeg, Canada.

Copies of this bibliography can be obtained from Dr. G. Scott, Department of Geography, University of Winnipeg, 515 Portage Avenue, Winnipeg, Manitoba, Canada. R3B 2E9. As with other bibliographies it is strongly recommended that the original article be checked rather than quoting information directly from this bibliography.

Araneta, Teodoro C. (1978)

"Zamboanga Forest Managers Corporation Agroforestry Farm Model Project". Canopy, 4(1); 6-7.

Kaiñginero Co-operation Farmers being organized into a farmer production and marketing cooperative. "Seldas" or working families (of seven) are formed to do planting and harvesting. They get one year permit until the company is satisfied that things are going well.

Arañez, German B. and Rogelio B. Baggayan. (1978)

"Reforestation and Afforestation in the Philippines." Paper presented during the First Philippines Forestry Congress, Philippine Village Hotel. Oct. 2-6, 1978.

The problem of reforestation facing the Philippine people is enormous. Salient factors are reviewed that contributed to the destruction of their forest. Other programs have been initiated to beautify the nation incorporating control of environmental and pollution problems.

Baconguis, Santiago R. (1978).

"Enhancing quality of life through watershed and water resources development."

Paper presented at the Fourth Anniversary Symposium. FORI College Laguna. Dec. 18, 1978.

Outline present Philippine problems of floods, drought, and sea intrusion (in the cities of Cebu and Butuan). The destruction of watersheds should be reversed and every Barangay should have specially protected watersheds. Problems of Kaiñgineros and squatters inside the watersheds should be studied.

Baggayan, Rogelio B. (1977).

"A Place for afforestation/reforestation in hill-country development." Proceedings International Workshop on Hilly Land Development. 3-6 Aug. 1977. Legaspi City, RP. pp 241-246.

Discusses P.D. #1153 and P.D. 705 Sect. 27. regarding reforestation.

Basada, Romeo M. (1979).

"Fertilization as a forestry tool in the tropics." Canopy, 5(10): 12-14.

The advantages of fertilizing as a means of increasing crop productivity is discussed. Examples of fertilizer applications in specific tropical areas are given and it is concluded that fertilization appears to be a useful silvicultural tool with potential for the Philippines.

Basada, R. N. (1977).

"PICOP'S agroforestry program". Canopy, 3(5):7

This PICOP project blends forestry and agriculture into a single operation working hand in hand towards the attainment of objectives. PICOP needs 430 tons perday to satisfy its pulp and paper mill. Also discusses the newly established Dipterocarp Research Centre (of FORI) located in Bislig Surigao del Sur and whose main thrust is

research on the perpetuation of the dipterocarp forests.

Benge, Michael (1977).-

"Leucaena: a good nurse crop." Canopy, 3(5):6.

This mentions the use of Leucaena leucocephala as a primary reforestation species in 'alang-alang' (cogon) grasslands in Indonesia. Leucaena is also a good nurse crop for coffee, cacao, kapok and vanilla.

Benge, Michael D. (1977).

"The private sector's contribution to reforestation" Canopy, 3(6):4-5.

Mabuhay Vinol has 380 ha in great ipil-ipil to produce charcoal for production of carbide.

Binua, Thomas M. and Moises A. Torio (1979).

"Kaiñgineros as full-time partners in reforestation" Canopy, 5(1):5.

This points out that to reforest the 1,365,205 ha of watershed considered critical in RP would cost ₱ 2,593,887,500 at the rate of ₱ 1,900/ha. Why not pay the kaiñginero to do it, they are available. (Indicates that kaiñgining is a simplistic problem but unfortunately gives an even more simplistic solution).

Bucad, Armando V. (1979)

"The Greeners' North: A model" Canopy Feb. 1979 vol. 5. no. 2, p. 5.

Two hundred metres on each side of the Reforestation Highway, both sides are planted to premium and fast-growing species, nurtured by the latest in water-system technology.

Bucad, Armando V. (1978)

"Private reforestation for the Philippines". Canopy, 4(5): p. 1, 11, 12.

A revolutionary idea for reforestation using the private sector is given. Outlines need for increased efforts due to such problems as PCARR (1976) report that 14% field survival is all that is experienced in national reforestation efforts. Proposes the set-up of a Reforestation Board to supervise reforestation companies.

Bueno Jr., Aguinaldo C., (1979).

"Revegetation of mining disposal areas" Canopy 5(8):1, 3, 5.

The effects of mining on the environment are explored.

Bureau of Forest Development (1979).

"Communal Tree Farm Information-Kit"

The Bureau of Forest Development will provide the technical know-how in the establishment of tree plantations.

Carlos, Juan T. (1977)

"Fruit tree farming - An alternative in Hilly country development." Proceedings International Workshop on Hilly Land Development 3-6 Aug. 1977 Legaspi City, RP. pp 265-271.

The case for fruit tree farming in hilly areas is presented.

Claveria, Jose R. (1953).

"Growing Benguet pine (Pinus insularis Enol C.) in Cebu Province." Philippine Journal of Forestry. 9:57-76

Benguet Pine grows in habitats not altogether the same as original home.

Claveria, Jose R. (1953).

"Hambabalud (Neonauclea formicaria (Elm) Merr.) as a reforestation crop." Philippine Journal of Forestry. 9:145-168.

The vast cogon and open areas all over the Philippines, estimated to be 17.5% of its total land area, the result of roving system of agriculture or shifting system of cultivation practiced by both nomadic and settled populations, produces a difficult economic problem for the government today.

Corales, Juan and Policarpo de la Cerna. (1950)

"Cebu reforestation project". Philippine Journal of Forestry. 6: 5-22.

The Cebu Reforestation Project or "Forestal" is 2,700 ha in 16 non contiguous blocks.

Dacanay, Placido (1949).

"Utilization of wastelands and the economics and development of reforestation in the Philippines." Philippine Journal of Forestry. 6:199-216.

Kaiñgin form of agriculture is undoubtedly, the largest single cause of forest-destruction in tropical countries. 17.5% has been converted into open and grasslands covered mostly with cogon. The article gives some history of reforestation in the Philippines and includes a map of reforestation projects.

Dimingo, Ireneo L. (1977)

"Industrial forest-plantations in Hilly land development" Proceedings International Workshop on Hilly Land Development, 3-6-Aug. 1977 Legaspi City RP.

The development of industrial forest-plantations is now a major forestry activity in the Philippines.

Duldulao, Anacleto C. (1975)

Kaiñgineros' Perceptions of and Attitudes Towards Forest Conservation in Mt. Makiling, Laguna, Philippines. Ph.D. Thesis. College of Forestry, Los Baños, Laguna R.P.

Duldulao, Anacleto C. (1974).

"Reforestation is not a problem" Forestry Digest 2(3):15-16

The Philippines has suffered more than enough already from floods but it will continue to suffer more if vegetation is not brought back to denuded mountain areas. About 1.5 million hectares of vital watersheds lands need immediate reforestation. It is only a problem if we allow it to be.

Duldulao, A. C; W.C. Depositario; E. A. Llapitan; J. D. Olivari and A. G. Principe. (1977)

"An Integrated Project for Kaiñgin Control in the Philippines: A New Approach to Forest Conservation" UPLB DNR-PCARR Proj. No. 238. Phase I Socio-Economic Profile Survey of Kaiñginero

Co-operatives.

Editorial (1979)

"Reforestation gains are listed." Bulletin Today, 78(8), Feb. 8, 1979.

This recounts hectarage reforested, showing an increase in rate of reforestation on the average deforestation dropped from 170,000 ha in 1973 to 65,958 in 1978 through increased protection of forests. Private citizens also aid in reforestation.

Editorial (1971)

"Firm Enforcement of Conservation. The Anokan Case." Forests and Farms: 6(7):5-6.

FFF (Free Farmers Federation) cut down plantation of Albizia and Lumbang in Anakam-Nasipit reforestation project, Gingoog. in May - June 1971.

Editorial (1970)

"How to solve the Kaiñigin Problem". Forests and Farms 5(10): 13-14.

Kaiñgineros need to be integrated with opportunities to progress. PICOP and Siliman University have demonstrated the agro-forestry technique.

Editorial (1961)

"Extensive Reforestation is Needed" The Lumberman: 7(4):21

Deforestation and open lands are now so widespread that there is no province that does not possess them.

Espinosa, Longinos M. (1952)

"Forestry Problems in Antique". Forestry Leaves, 5(4):25&30.

This pernicious practice which has been long in vogue in this province has converted big portions of the once beautiful and bountiful forest into a vast cogon land of about 51,760 ha or about 19% of the entire area of this province, leaving only scattered patches of forest along the provincial boundaries.

Festin, Seneco D. (1972)

"The Taungya or Shamba System of Land Cultivation" Reforestation Monthly 11(1-3):14-15.

The Shamba System of Kenya is discussed, giving three factors that are necessary for its success. This system is similar to the Tree Farm Lease Agreement which only aggravated the problem.

Fontanilla, Conrad (1977).

"Our problem in reforestation is getting the people involved". Canopy, 3(5):5 &14.

In the Philippines, the problem in reforestation is getting the people involved in reforestation work.

Fontanilla, Florentine (1971)

"Grazing on Reforestation Plantations" Reforestation Monthly, 10,(2-4): 26-27.

Helps eliminate weeding, and fires and some trees do better e.g. Nasipit in its Lumbang plantations. Suitable when the

trees are tall enough to withstand trampling, but not so big as to shade out groundcover.

Galang, Eduardo (Moderator) (1978).

Abstract of "Economics of wise forest utilization and development." Seminar of First Philippine Forestry Congress Oct. 2-6, 1978. Philippine Village Hotel, Manila.

With the present logging system, it is estimated that about 0.6256 billion cu. m. are lost either to logging wastes or wood residues. The paper expressed need for research on use of these wastes.

Ganapin, Delfin J. Jr. (1978)

"Quo Vadis, Philippine Forests?" Forestry Digest 5(2): 1-16.

Illegal logging is the rich mans' stress on the forest.  
Kaiñigin is the poor mans' stress.

Gandaman, Alma (1971)

"Tree farming: Answer to reforestation." Philippine Farms and Gardens. 8(3):12.

Lists the usual problems of deforestation and squatting. Areas needed to be reforested is about 5 million ha. In Bislig, Surigao del Sur 70 farmers with 10 ha each planting Albizia.

Garcia, Paulino (1960)

"Forest Conservation, A Responsibility". Philippine Journal of Forestry. 16:203-205.

Generalao, Maximino L. (1979)

"ILCO goes agroforestry" Canopy 5(8):7.

The objectives of the Insular Lumber Company (ILCO) at Hinobuan are outlined.

Generalao, M. L. (1978)

"Land use pattern and its relation to agroforestry" Canopy 4(6):7

The development of combined agriculture and forest resources has necessitated both institutional and economic measures for land management.

Generalao, Maximino L. (1977)

"Agro-forestry for optimum land use and rehabilitation of denuded areas". Canopy 3(8):7

Agro-forestry is stressed as a measure to be taken to help control the bad aspects of kaiñgining as PD 705 does not seem to stress the effects of this practice.

Glori, Antonio V. (1977)

"Direct seeding in the Philippines: A Challenge". Paper presented at the Third Anniversary Symposium FORI, College Laguna, Dec. 18, 1977.

Due to escalating expenses in reforestation direct seeding is suggested as a way of reducing costs by 50%. Possible factors affecting the performance of direct seeding practices are identified and included.

Hilario, Frank A. (1977)

"Reforestation Cities for the Philippines" Canopy 3(4):6,7,10.

Discusses the various approaches both tried and to be tried to reforestation. Then he outlines the method proposed by FORI field members to establish 20,000 ha reforestation companies. It lists the necessary facts, figures and costs.

Lantican, Domingo M. (1974)

"A Better life through forest conservation" Forest Digest 2(3):8-10

Birth of the forest service was in June 1863 with the organization of the "Inspection General de Monte". The recommendation of the Bureau of Forestry as optimum forest land is the balance of the province - 26.65%.

Laraya, Sixto (1950)

"Some causes of failures in forest plantations and their solutions." Philippine Journal of Forestry 7:23-29.

At this time (1950) the Bureau of Forestry has 34 reforestation projects throughout RP. Reasons for failures in reforestation ventures are listed.

Laudencia, Pedro N. (1972)

"Soil and Water Conservation Through the Improvement of Soil Cover." Philippine Geographical Journal 16:42-52.

Lizardo, Leonor (1960)

"Results of trial planting of Eucalyptus in the Philippines" Philippine Journal of Forestry, 16:31-45

Eucalyptus deglupta Blume is the only species of eucalyptus found naturally here. Lists eucalyptus species already tried.

Lopez, Melecio and Carlos Cunanan (1954)

"Brief history of the Canlaon reforestation project" Philippine Journal of Forestry 10:15-30.

In the forested area man is considered the most destructive agency.

Lorredo, Jorge Jr. (1974)

"The PICOP Civic Action Program." Forestry Digest 3(1):11-18.

Doña Carmen resettlement project of kaiñgineros PICOP concession land. An initial 189 kaiñginero families out of 2,182 who were squatting inside the forest reserve of PICOP have been relocated. Each has a 600 m<sup>2</sup> house site and 2 ha of land.

Luna, T. W. (1963)

"Land utilization in Ilocos Norte" Philippine Geographical Journal 7(3):133-142.

Kaiñgin is almost exclusively practiced in hilly and mountainous areas where slopes are steep. Increased runoff and sedimentation have turned many permanent deep flowing rivers into intermittent shallow and gravelly rivers. It might be easier to improve the cogonales than reforest them.

Maceren, Felix (1952)

"Reforestation in Bohol" Forestry Leaves 5(3):26

Unfortunate destruction of forests by ruthless cutting and the kaiñgin system has transformed what was once a source of income for the government into a complicated and expensive problem needing immediate action.

Makil, Jose and Severino T. Ancheta (1953)

"Brief history of the Paraiso reforestation project." Philippine Journal of Forestry 9:11-21

This Ilocos Norte Project started in 1930 was designed to reforest the headwaters of the Laoag - Vintar Irrigation system.

Matela, Arcadio G. (1972)

"DBP Okays First Loan for tree-planting Industry" Permafor. Forest and farms. 7(3):8-9.

Mendoza, Valerio B. (1979)

"How to grow yemane in cogon and Themeda grasslands." Canopy 5(12):10 & 14.

Discusses seed collection, pregermination treatment, sowing, and seedling size for Gmelina arborea (yemane). Also includes information on fertilizers and maintenance of seedlings.

Mendoza, Valerio B. (1978)

"Revegetating Philippine grasslands need ecological approaches". Canopy 4(6):5

Stresses significance of success to the grassland rehabilitation problem. Suggests pathways for Philippine reforestation work - includes natural succession.

Mendoza, Valerio B. (1977)

"Some ecological considerations in the rehabilitation of Philippine grassland areas." Paper presented at the Third Anniversary Symposium FORI College Laguna 18 Dec. 1977.

Different approaches and mechanisms by which plant succession under Philippine conditions can progressively proceed are outlined. Refers to conditions under which cogon can be killed e.g. shading. Rehabilitation of grasslands needs much more study.

Mendoza, V.B. and R.E. de la Cruz (1978)

"Adaptability of six tree species to cogonal areas. III. Field experiment and additional information" Sylvatrop Philippine Forestry Research Journal 3(2):95-106.

Height and diameter growths were not significantly different, but ipil-ipil (L. leucocephala L.) had the highest survival rate. An enormous amount of manpower, money and time is virtually wasted yearly in reforestation activities because of our lack of understanding of the ecology of Philippine grasslands.

Micoso, Rhodora S. (1977)

"Successful reforestation of barren lands" Canopy 3(5):12.

Likes the use of nitrogen producing species in early revegetation of barren areas. Inoculation could well help in areas of poor soils.

Monsalud, Manuel R. (1971)

"Possible Solution to Kaiñgin Problem" Forests and Farms  
6(6):10-11.

Agroforestry - modified and subsidized Kaiñgining.

Nablo S.U. (1968)

"Conservation Activities and Problems in the Republic of the Philippines". in Talbot, L.M. and M.H. Talbot (eds) Conservation in Tropical South East Asia. International Union for Conservation of Nature and Natural Resources, Morges, Switzerland 1968.

General list of laws and agencies dealing with conservation.

Nano, Jose F. (1951)

"Brief History of Forestry in the Philippines" Philippine Journal of Forestry 8:9-125

Discusses the various attempts throughout history to protect the forests from the Spanish concepts in the early history through to the various laws and projects of the 1900's.

Oracion, T.S. (1963)

"Kaiñgin agriculture among the Bukidnons of South-Eastern Negros, Philippines." Journal of Tropical Geography 17:213-224

A Kaiñgin is maintained for at least two years and sometimes for four or five years, but the rapid growth of secondary forest and of cogon grasses limits the Bukidnon's ability to cultivate a plot permanently.

Ordinario, Felix (1978)

"Agro-forestry: a solution" Canopy 4(12):11

Agro-forestry is the intensive development of the land by devoting that portion which is suitable to agriculture for the production of farm crops and raising livestock, with sub-marginal areas left to tree farming. This is the best means of preserving the fertility and structure of most tropical soils and produces the greatest return to the farmer in the long run.

Ordinario, Felix F. (1978)

"Agro-forestry for the enhancement of the quality of Life"

Paper presented at the Fourth Anniversary Symposium FORI College Laguna Dec. 18, 1978.

Publico, Zosimo M. (1971)

"Critical watershed areas need reforestation." Forests and Farms 6(11):4

Reforestation Administration lists nine watersheds as critical in respect to reforestation work.

Parks and Wildlife Office, Manila, Philippines (1968)

"Status of Conservation in the Philippines" pp 468-480

in Talbot, L.M. and M.H. Talbot Conservation in Tropical South East Asia. International Union for Conservation of Nature and Natural Resources, Morges, Switzerland.

Basic outline of Government Departments and Agencies responsible for conservation in RP. Indicates that the forest cover of the Philippines was 42% in 1964. Gives a list of the most urgent conservation problems in the country and lists the national parks.

Pelson, Dante N. (1978)

"The Crucifixion: 20th Century Version" Forestry Digest:  
5(2): p.o. & 72.

Penafiel, S. R. (1978)

"The ecologic role of fire in resource management for human survival." Paper presented at the Fourth Anniversary Symposium FORI, College Laguna. Dec. 18, 1978.

Outlines the history of fire and its use. Discusses fires in Benguet pine (P. Kesiya), the use of prescribed burning, and grassland management.

Perino, Jemuel M. (1979)

"Replanting degraded slopes" Canopy 5(1):5

Discusses how seedling survival poses a major problem in reforestation. We have had less than 50% seedling survival throughout the country.

Pollisco, F. S. (1975)

"Reforestation and silvicultural techniques for the regeneration of Philippine forests." Canopy, 1(6):1-3 & 6-8

Forestry administration, effect of kaiñgin-making, reforestation and socio-economics are discussed. The objectives of agro-forestry are also outlined.

Postrado, Biencenido (1972)

"On utilizing the kaiñgineros as 'reforesters'" Reforestation Monthly, 11(4&5):21-22

DANR has announced they will get kaiñgineros to plant trees instead of destroying them - agro-forestry - BUT have they carried out a "thorough comprehensive and integrated study conducted on the sociology, economics, and dynamics of kaingin? Have we taken into consideration his mind, desires and response? If we don't plan this properly (kaingin management), it will flop like all the rest.

Regadio, J. P. (1977)

"The family-approach reforestation program in the Philippines" Canopy, 3(4):4-5 &10.

The scheme of the Family-Approach Reforestation Program in Malaybalay is discussed as to its advantages, schema, implementation and evaluation.

Reyes, Gregorio D. (1978)

"Agri-silviculture: a Multiple use alternative". Canopy 4(5):8-10

Agro-silvicultural methods (e.g. taungya and its variations) are being implemented in many places. Gives an outline of traditional taungya and their practices already operating in the Philippines.

Reyes, Imelda E. (1975)

"Giant Ipil-ipil: The Marvelous Tree" Forestry Digest 3(3):27-32

In five years it can reach a height of 35-40' with a dbh of 18-20cm. It was introduced by Dole Pineapple in '60's. The ipil-ipil can be used for: fertilizer, forage, feed, food, firebreaks fence, fuel, fiber, posts and poles and as a reforestation species.

Reyes, Martin R. (1978)

"Philippine Forest Resources", The Malaysian Forester, 41(2):104-113  
States that the dipterocarp forests consist of 3.78 ml ha  
young growth (logged-over areas) and 3.8 ml ha reproduction/  
brush. The paper concludes with a discussion of reforestation.

Reyes, Martin R. (1978)

"Possibilities of increasing the yields of tropical rainforest in  
the Philippines." The Malaysian Forester 41(2):167-170  
The rate of forest conversion to non-forest  
is decreasing due to the determination of the government. Possi-  
bilities for improving yields are discussed.

Reyes, Martin R. (1977)

"Recent research advances and prospects in forest production"  
Canopy 3(2):6-7

Fertilization significantly increases survival rate of seedlings  
particularly in poor cogon soils. Fertilization is still not  
practiced in these programs yet.

Reyes, Martin R. (1977)

"Recent research advances and prospects in forest production"  
Canopy 3(4):8-10

Good outline of the state of reforestation in RP. Paints a  
very positive picture of the future.

Reyes, Martin R. (1976)

"FORI and our national reforestation efforts" Canopy 2(4):2  
DAP (Development Academy of the Philippines) reports (1976)  
that the present rate of forest destruction is 570 ha/day  
or 204,000 ha/year - determined by Inventory of Natural Resources.

Rimando, Pepidio, F. (1977)

"Why agro-forestry?" Canopy 3(1):9

It is a Chinese concept that is more than taungya or shamba  
system. It embraces not only the block plantation establishment  
and land which is not suitable for herbaceous crops, but also the  
the cultivation of food and fodder crops. In the Rep. of the Phil.  
there are two methods; tree farming and modified taungya system.

Rosario, Emilio A. (1978)

"The need for flood plain management." Paper presented at the  
Fourth Anniversary Symposium FORI, College Laguna. Dec 18, 1978.  
Published in Canopy 5(2):2-3

Recommends the establishment of a "Flood Plain Management  
Authority" to have the sole function of managing the development  
and use of flood plains. A list of steps required to make flood  
plain management a reality are outlined.

San Buenaventura, P. (1958)

"Reforestation of Imperata Waste Lands in the Philippines."  
Philippine Journal of Forestry 14:67-76

As of 1958 there were 5,073,000 ha of grassland and open  
lands in the Philippines (17%). A map of the major areas is given.  
A table is also given of the reforestation projects.

Sanvictores, Ernesto F. and Dominador M. Faustino (1978)  
 "Forest Protect". Paper presented at the First Philippine Forestry Congress, Philippine Village Hotel, Metro Manila Oct. 2-6, 1978

Long term and short term recommendations for effective protection of Philippine forests is discussed. Kaiñgin destroys 80,000 ha of forest annually.

Sanvictores, Jose G. Sr. (1970)

"Some serious problems in forest conservation" Forests and Farms 5(2 :12-13

Agrees with foresters that annual cut is less than regrowth. One evidence that this is correct is the continuous export of large quantities of logs and wood products over the years without apparently causing any visible strain on production.

Sanvictores, Jose G. (1969)

"Prospects and Implications of Sustained Yield Management and Sound Reforestation Practices at Aras - Asan." Philippine Geographical Journal 13:50-54.

Explains effects and problems of deforestation. Blames the foresters and the kaiñgineros but explains they do it because there is little alternative.

Scott, Geoffrey, A. J. (1979)

"The Evolution of the Socio-Economic Approach to Forest Occupancy (Kaiñgin) Management in the Philippines." Philippine Geographical Journal 23(2):58-73

The socio-economic approach to forest occupancy (kaiñgin) is still in its infancy. The gradual acceptance by the general public that traditional kaiñginig is bad for everyone is now being accepted which will help protect large areas of forests that still remain for future generations. Changes in Kaiñgining is important for this to occur.

Serevo, Tiburcio S. (1960)

"Silviculture of Tropical Rain Forest With Special References To the Philippine Dipterocarp Forest." Proceedings of the Fifth World Forestry Congress 3:1985-1994. Seattle, Washington.

Briefly discusses Philippine Dipterocarp forests, then outlines the silvicultural practices of loggers and "selective logging".

Suiza, Rene B. (1979)

"Agroforestry is recycling, too." Canopy 5(7):11

Compost making fertilizers and waste recycling are considered. Agroforestry is a good pathway in the production of organic fertilizers.

Suiza, Rene B. (1977)

"Lesser-known trees with reforestation potentials." Canopy 3(9):5

Lists some important species which for one reason or another are largely ignored. The geographical distribution of some are described as well as their economic uses.

Solit, C., F. Asiddao and M. R. Reyes (1962)

"Growth of tropical forest with special reference to the Philippine

Dipterocarp Forests." Philippine Journal of Forestry 18: 69-73, 90-91.

Discusses the importance of growth studies on Philippine dipterocarps. Gives measurement techniques used.

Tamesis, F. (1976)

"Forest plantation Development." Philippine Geographical Journal 20:55-60.

Discusses the development of private forest plantations by the Nasipit Lumber Co. Inc. and the Auokan Lumber Co.

Lumbang plantations produce oil while ground cover feeds cattle and horses. By the end of 1973 there were 7 million growing trees in the plantation.

Tamesis, F. (1969)

"The development of the Nasipit tree farm." Philippine Geographical Journal 13:4-11.

Cut-over areas were checked for suitability for agriculture and found not suitable for agriculture due to poor soils. An agriculturalist suggested either basic kaiñgin and fallow works or tree farming; the latter was accepted.

Tamesis, Florencio and Valentin Sajor (1953)

"Forest grazing in the Philippines" Philippine Journal of Forestry 9:1-8

Grazing is regulated by the Pasture Land Act. Approximately 97.5% of the forest is government owned and administered by the bureau of forestry.

Tomboc, C. C. (1978)

"Research on the production of dipterocarps and the dipterocarp forest of the Philippines" Canopy, 4(5):7; 4(6):11; 4(7):13; 4(12):6-7.

The study is concerned with the growth and yield determination of second-growth forests. The studies under biometrics have to do with the multiple correlation in predicting the growth of many-aged apitong stands, the effect of logging injury on the growth and yield of logging residuals. The dipterocarp should remain to be the major source of raw materials of the wood industry, the habitat for wildlife and an important watershed of the country.

Uichanco, L.B. (1971)

"Should Laguna de Bay and Pasig river be left to their doom?" Philippine Geographical Journal 15:84-89.

Through ruthless deforestation resulting from the illegal activities of kaiñgineros and unlicensed loggers, the watersheds of the rivers and springs feeding the lake have been laid bare. Consequently, the lakes' volume was reduced and the water level lowered.

Umali, D. L. (1970)

"Approaches to forest Conservation" Forests and Farms 5(8):14&17.

The positive approach does not work. Kaiñgineros are really victims of social injustice and economic destitution. They troop to the forest, the department of last resort.

Upland Hydroecology Research Program (1978)

"Summary Results, Policy Implications and Recommendations

(1976-1978)" University of the Philippines of Los Baños, College Laguna July 1978.

Summary results, policy implications and recommendations (1976-78) for upland resource development are discussed with respect to the influence of physical, biological and socio-economic factors.

Viado, Jose B. (1973)

"Reforestation programs in the Philippines" Forestry Digest 1(2):20-23

General discussion of the history of reforestation, applied research on reforestation, some successes and the value of reforestation.

Viado, Jose (1972)

"RP Forests: The best legacy for tomorrow's generation"

Reforestation Monthly 11(1-3):12-14.

There is very little probability that the remaining virgin forests will last beyond 33 years. They also warn that it is very doubtful whether the yield capacity of the productive forest land which has been utilized in the last decades will be sufficient to maintain the log production after the virgin forests have been exploited.

Viado, J. and L.D. Angeles (1966)

"The Planning, Organization and Implementation of a Large-scale Afforestation and Reforestation in the Philippines."

Proceedings at the Sixth World Forestry Conference. Madrid (1966) pp.735-749.

Covers the environment of the Philippines, the history of forestry and reforestation, and the objectives of the Reforestation Administration. Its work is discussed and tables of values are given for vegetation cover as they relate to the plans of the Administration.

Vilar, Crisostomo B. (1968)

"Kaiñgin making: Roadblock to reforestation." Philippine Forests 2(2):26 and 61.

"A monstrous evil," Based on the findings of the National Economic Council, 172,000 ha are laid waste annually. Of this 40,000 ha are due to kaiñgining.

Wright, Timothy W. (1978)

"Querencia Calamianes: A Geographic approach to Intergrated Regional Conservation and Development in Calamianes, Palawan, Philippines. Ph.D dissertation in Geography U. Hawaii.

## DEFORESTATION

Achacoso, Isabela (1951)

"Food production does not mean forest destruction". Forestry Leaves 5(1):13 & 17.

Kaiñgin is "an evil practice, which is largely responsible in the conversion of our once extensive and valuable forest into open and denuded mountain ranges." Make more use of land already classified as agricultural this will reduce need to use the forests.

Agaloos, B. C. (1964)

"Forest Resource Statistics for Western Mindanao" U.S. AID/NEC Forest Development Project, Bureau of Forestry, Manila

Forests now occupy 1,111,000 ha or 59% of the land area in Western Mindanao. The area of old-growth timber in Western Mindanao has been diminishing at the average annual rate of 25,000 ha per year during the last eleven years.

Aguhob, Enriquita C. (1977)

"A forest is cut: what happens" Canopy 3(5):11

Discusses the effects of forest cutting on soils, soil erosion, runoff and water supplies. Stresses that streamflow increases are proportional to area of forest in watershed cut down.

Anonymous (1972)

"Where are the Kaiñgins?" Permafor Forests and Farms 7(6):12-13

Of the 51 districts surveyed, a total of 148,423 ha are being illegally occupied by kaiñgineros. Large areas at present occupied by kaiñgineros still remain unreported.

Current estimates place the yearly destruction of forests by kaiñgineros and other forest vandals at about 172,000 ha yearly.

Araneta, Salvador (1970)

"Should we export log or pulp?" Forestry Digest 1(2):54-55

It is more profitable per m<sup>3</sup> to ship pulp - also trees can be suitable and different.

Aranez, German B. and Rogelio B. Baggayan (1978)

Arnold, J. E.M. And Jules Jongma (1977)

"Fuelwood and charcoal in developing countries" Unasylva 29(118):2-9.

Arroyo, Cesar A. (1978)

"Development of mangrove resources for the enhancement of the quality of Human life." Paper presented during the Fourth Anniversary Symposium FORI College Laguna Dec. 18, 1978.

Of the original 400,000 - 600,000 ha of mangrove, we have today perhaps 100,000 ha - it is being removed at the rate of 29,000 ha/yr so it may not last long. Stress the uses made from mangrove swamps both for wood products, agriculture and others.

Baconguis, Santiago R. (1978)  
 - see Aforestation

Baja-Lapis, Aida (1976)

"Effects of logging injury on sustained yield." Canopy 2(4):11  
 Sustained yield of forest resources is the key word for continuous forest production. Observations have indicated that unsupervised logging operations have caused great damage to residuals despite government directives. What is a tolerable level of injuries? Research is needed to find out.

Bedard, Paul W. and Tiburcio S. Serevo (1955)

"Feasibility of Selective logging in Dipterocarp forests." Philippine Journal of Forestry 11:203-209

Defines selective logging. The objective of forest management in dipterocarp forests should be the maintenance of the stand in continuous production through natural regeneration. Stresses the need for the logging industry to use this system in stands with a fairly even distribution of all-size classes, particularly of the smaller size.

Bruce, Romeo (1977)

"Save our forest today and live better tomorrow". Centre for Development Information. Development Academy of the Philippines Oct. 1977 Mineo.

Full data on area of provinces, forest area agricultural area, etc.

Budowski (1977)

The Melanesian Environment

Burley, T. M. (1973)

"The Philippines. An Economic and Social Geography" G. Bell and Sons Ltd. London pp. 375

Population pressure and/or commercial incentive resulting from either the establishment of regular barter trading or the practice of kaiñgin agriculture as a supplementary source of income by more sophisticated Filipinos has resulted in the permanent establishment of large areas of second growth forest or cogon grasslands.

Cacanindin, D. C.; L. S. Micosa; J. P. Benson & E. S. Asilo (1976)

Pendleton, Robert L. (1942)

"Land Utilization and Agriculture of Mindanao, Philippines."

The Geographical Review 32:180-210

As a result of kaiñgining, or shifting cultivation, grassy plains and slopes of vast extent are found. They are useful for cattle. Cogon burns rapidly, even when green. When it is burned annually, as is usually the case, it becomes thicker and thicker and only a very few kinds of small 'fire proof' trees survive.

Pendleton, R. L. (1940)

"Soil Erosion in the Tropics." Journal of Forestry 38:753-762.

The steep slopes are used to grow maize, and often have been cultivated until the soil has been entirely eroded away, leaving exposed the whitish coralline rock.

Rabor, D. S. (1971)

"Wildlife Conservation in the Philippines." Philippine Geographical Journal 15:46-63.

RP really no longer is rich in wildlife resources. The laws read well but they are not enforced. Deforestation, regardless of what the supposed forestry experts say, has already reached dangerous proportions.

Rabor, D. S. (1959)

"The Impact of Deforestation on Birds of Cebu, Philippines, with new records for that Island." The Auk 76:37-43.

Of the original ten endemic forms (of bird) which were once there, only one has continued to exist at present. The single

remaining form has become adapted to a bamboo-grove type of habitat; but it is very rare.

Raros, R. S. (1979)

"Cropping systems research and development of hillyland rehabilitation." SEARCA Professional Chair Inaugural Lecture. June 15, 1979, UPLB College of Forestry, Los Baños, Philippines.

There is a trend to move to upland locations among lowland communities. Technology is not suitable. It is important to sustain lowland crop production, expand the agricultural base, to assist rehabilitation of uplands. Mixed cropping systems are desirable, if they can be introduced to communities in a socio-economically viable way.

Reyes, Martin R. (1978)

"Possibilities of increasing the yields of tropical rainforest in the Philippines."

-see Aforestation

Reyes, Martin R. (1978)

"Natural forests need attention." Canopy 4(12):3.

With guidance and supervision by foresters whose real place of work is in the forest, selective logging can succeed as a practice of forestry - science, art and business, serving the peoples economic and environmental needs."

Reyes, M. R. (1959)

"Natural Regeneration of the Philippines Dipterocarp Forest." The Philippine Journal of Forestry, 15:39-59.

After a discussion of the economic importance of the dipterocarp forests is given a description of the major species and their distribution. Discussion of regeneration in logged-over areas follows and government measures are listed. To date some 7,700 ha have been suitably logged leaving good residual growing stock in Mindanao.

Roberto, Leonardo R. (1970)

"Solution to forest fires and kaiñgin making- Naval stores." Philippine Forests 4(2)12-13&31.

You cannot make people forest conservation conscious unless they have an alternative to earn a living. Pine imparts acidity to the soil so is considered by the farmers to be a jinx. Produce resin for naval stores here instead of imports. One company imports about ₱ 2 million/year for sizing and for the paint and allied industries. The native can tap resin and make above the national average in 8 month season.

Roberto, Leonardo (1970)

"Kaiñgineros threaten Mt. Makiling." Forests and Farms 5(10):8-9&21.

3,910.7 ha in Makiling is forest. Only transferred to UP in 1962. Water is drying up in the creeks of Colamba and almost 1/3 of forests is threatened by kaiñgineros.

Rosario, Emilio A. (1979)

"Environmental considerations in multiple-use forest management planning in the Philippines." Canopy 5(9):8-12.

The environmental impact of man on the physical, chemical, biological, cultural and socio-economic elements are reviewed.

Sajise, P. E. (1975)

"Ecology in the Philippine setting: issues and challenges." Philippine Geographical Journal 19:99-104.

Thirty percent of South East Asia is grassland. R. P. originally was forested.

Sanchez, Eduardo R. (1971)

"Grim future for RP Forests." Philippine Farms and Gardens 8(15):15.

If the present trend is not reversed, the Philippines will have to import ₱ 3 billion worth of logs for domestic consumption alone by the year 2000. Kaiñgineros cut 80,000 ha/year.

Sanvictores, B. F. (1975)

"Moving away from log exports." Unasylva 27(2):10-14

By 1973 only 33% of the country's timber was being processed locally into lumber. Sawmills were operating at about 25% of operating capacity. Government policy is to phase out exports of logs until it enforces a total ban on January 1, 1976.

Sanvictores, Ernesto, et. al. (1978)

-see Aforestation

Sanvictores, Jose G. Sr. (1970)

-see Aforestation

Serevo, Tiburcio S. (1964)

"Some aspects of the Philippine Forest Situation." Philippine Journal of Forestry 20:111-128.

Due to the decreasing area of volume of standing timber, Serevo suggests a realistic re-appraisal of Philippine forest policies. He states that there are 9.3 ml ha of commercial forest and 3.8 ml ha of non-commercial forest. He gives a favorable picture of both the volume of stands and the length of time they will last. Points to the low budget of the Bureau of Forestry as a problem.

Serevo, Tiburcio S., Florencio Asiddao and Martin R. Reyes (1961)

"Forest-Resources Inventory in the Philippines." The Lumberman 8(1):16-24.

Changes from 1935 to 1957 are not all due to cutting, but reclassification. Figures on kaiñgins are far from accurate.

Serna, Cirilo B. (1972)

"Kaiñgins: Facts, Figures and Why." Reforestation Monthly 11:3-5

Statistics are confused because no actual survey of kaiñgin occupancy has been done and there are differences in definition of the term. The total forest area depletion in the country is an average of 204,000ha/yr. It is due to agricultural expansion and shifting cultivation possibly accounts for about 26% of this total.

Serrano, Rogelio C. (1978)

"Preserving the Philippine Mangrove Swamps." Canopy 4(7):6-7

Lists common trees and fishes associated with RP mangrove stands. Also lists minor forest products and volume produced in those areas. Stresses the ecological values of mangrove swamps and problems in their preservation.

Sims, B. D. (1975)

"Man-induced fluvial erosion in the Upper Pampanga and Talavera Basins." Paper presented at the Philippine Forest Research Society Symposium on Watershed Management, Dec. 1975. UPLBCF, College, Laguna.

Spencer, J. E. (1957)

"Philippine soil, water and wood are worth maney now." Philippine Geographical Journal 5:57-69.

Former immigrants brought in the kaiñgin - an agricultural system that evolved which still plagues the country. With the coming of the Spanish many kaiñgineros became sedentary farmers. The Spanish, however, little understood the problems of soil erosion or forest-disappearance and did little to promote conservation in any of its aspects.

Sulit, Carlos, (1948)

"The farmer and the forest." News Bulletin. Philippine Department of Agriculture and Natural Resources. (Sept.- Oct. 1948) pp. 39-40.

General discussion of the effects of deforestation on the landscape. Grasslands develop which became the breeding place for locusts. Stresses that the farmer needs the forest so they 'save' each other.

Tamesis, Florencio (1976)

-see Aforestation

Tamesis, Florencio (1947)

"Forestry problems of the Republic." Philippine Journal of Forestry 5:3-6.

Brief discussion of Philippine forest problems and particularly the problem of wasteage, kaiñgining and agricultural development.

Uichanco, L. B. (1971)

-see Aforestation

Ulibassy, Manolito (1979)

"Logging roads (what have they done?)" Canopy 5(10):5

Incidental to the establishment of logging roads to extract logs, the roads open up the region to landless people and kaiñgin-making. They also contribute to erosion and sedimentation and impair revegetation.

Umali, D. L. (1970)

Upland Hydroecology Research Program (1978)

-see Aforestation

Uriarte, Nicolas S. (1978)

"Determination of relative clear-cut areas in selectively logged over forests." Paper presented at the Fourth Anniversary Symposium FORI College Laguna Dec. 18, 1978.

Deals with the Forestry Administration Order No. 23 and No. 74.

Vandermeer, Canute (1967)

"Population patterns on the Island of Cebu, the Philippines: 1500-1900." Annals of the Association of American Geographers 57:315-337.

Prior to 1900 the population growth of Cebu was higher than that of the whole Philippines because of a relative absence of malaria and the presence of the good harbour at Cebu City.

Cebu once supported a fairly complete natural cover of hardwoods forest. Today, however, forests occupy only 2-3 % of the total land area.

Velasco, Abraham B. (1970)

"Help save the forests of Abra." Forests and Farms 5(5):4-5.

The three main culprits of the forests are wood gatherers, (for fire-wood for the flue-curing barns of the tobacco industry), kaiñgineros, and ranchers.

Veracion, Vicente P. (1978)

"Managing mountain watersheds to benefit human society."

Paper presented at the Fourth Anniversary Symposium FORI. College Laguna Dec. 18, 1978.

Outlines the mountain watershed as an ecosystem and the hydrologic effect of cover change. Repeats the results of other effects. He then outlines a management approach for sound sustained watershed management in mountain watersheds.

Veracion, V. P. and A. C. B. Lopez (1975)

"Rainfall interception in a thinned Benquet Pine Forest stand."

Sylvatrop, Philippines Forest Research Journal 1:128-134.

Thinning a 30 year old natural Benquet Pine stand increases the amount of rainfall that reaches the ground which eventually becomes part of the ground water supply for human consumption and utilization. Different types of forest thinning and consequences of each type is discussed.

Viado, Jose B. (1973)

-see Aforestation

Whitford, H. N. (1921)

"Forests and Human Progress." Journal of Forestry 19:58-64.

Man with primitive methods of agriculture has dominated nearly three fourths of the virgin forest area of the Philippines. Here is a case where the grass and not the forest has dominated primitive mankind!

Wright, Timothy W. (1978)

-see Aforestation

Zon, R. (1920)

"Forest and Human Progress." Geographical Review 9:139-166.

It is estimated that kaiñgin-making has destroyed over half the original forest cover. Abandoned areas are covered by cogon grass.

## FOREST LAWS/ AGENCIES

Anonymous (1974)

"The Role of Local Government in forest Conservation." Forest Digest 2(3):17-18.

Local government should do much more about fires and kaiñgins. Probably it can be surmised that local governments are not too keen about forest conservation, because they do not get sufficient shares by way of income from our forest resources.

Arañez, German B. and Rogelio B. Baggayan (1978)

-see Aforestation

Arroyo, C. A. (1978)

"Man-made forest: implications and needs." Canopy 4(6):8

Timber licences, B.F.D. and other interested parties should combine their efforts to formulate the most appropriate system for the developement of industrial forest plantations.

Bureau of Forest Development (Mar.7, 1979)

"Additional Guidelines in the Implementation of the Forest Occupancy (Kaiñgin) Management Program." BFD Circular n. 14 Ministry of Natural Resources; RP Diliman, Quezon City.

Guidelines are set out to further improve forest occupancy management plans. An approval sheet, survey, application permit for a kaiñgin, occupancy evaluation sheet and other reports are included at the back.

Cruz, Virgilio C. Dela (1979)

"Shall we adopt the stumpage sale method in awarding timber licenses?" Canopy 5(2):4

Stumpage is standing timber which can be cut down and made into any of various wood products. The article evaluates stumpage.

Cruz, Virgilio C. Dela (1979)

"Production standards in the harvest of pine forests." Canopy April 1979 p. 14.

Information on time consumption for any given forestry work is of vital imporatnce to managers in the production standards on efficiency of their various production units.

Pelaez, Emmanuel (1960)

"The Framework of a Forest Conservation Act." Philippine Journal of Forestry 16:171-177.

In the present situation of increased drainage of forest resources it is necessary to make an effort to curtail this rate. The proposed Act, suggests that the present system of timber cutting concessions should be replaced with a system of long-term leases. Present laws do not place responsibility with the local governments.

## WATERSHED PROBLEMS / FLOODS

Angeles, L. D. (1963)

"Infiltration Studies on a Grassland Watershed in Northern Nueva Ecija." Philippine Geographical Journal 7:102-113

An experiment designed to examine the influence of land use practices on infiltration rates, comparing rates between the grazed and protected areas. Mean infiltration rates for the protected and non-protected areas are 1.58 and .49 literes/hour respectively. Relates these results to run-off.

Baconguis, Santiago R. (1978)

"Rainfall - suspended sediment relationship of annually burned grassland watershed." Sylvatrop Philippine Forest Research Journal 3(2):85-94.

Burning of grasslands in the Philippines is an old practice of herders in order to rejuvenate old, unpalatable forage. Watershed values are never looked into. 64 - 72.25% of the variation in stream sediment for a 4 year period could be explained by linear regression with rainfall as the independent variable.

Baconguis, Santiago R. (1978)

-see Aforestation

Bruce, R. (1978)

"Watershed as a planning unit." Philippine Geographical Journal 22:161-170

Discusses the physical characteristics of a watershed and stress the value of watersheds in economic development and policy. Gives maps of the political and water resource regions of the Philippines.

Malay, P. C. (1957)

"A geographical summary of Cebu Province." Philippine Geographical Journal 5:75-76.

The steeper hills are abandoned when yields of corn become too low. Dry farming is practiced on the steeper slopes, with the result that the soil is exposed to severe erosion in 9/10 of the area. The low yield of corn attests to the barrenness of the soil and lack of scientific agricultural practices.

Mamisao, J. P. (1963)

"Soil Conservation Trends in the Philippines." Philippine Geographical Journal 7:56-64.

Lists a breakdown of land use for all of RP with detailed breakdown of agricultural land. 67-85% of the agricultural land needs careful conservation with mechanical and vegetative erosion control measures.
